Analysis by the Legislative Reference Bureau

Current law allows designated school personnel and authorized entities and individuals who have completed a training program and school nurses to provide or administer epinephrine auto-injectors to pupils and other individuals. Pupils are also allowed under current law to possess and use an epinephrine auto-injector in certain circumstances. Current law allows prescribers to prescribe epinephrine auto-injectors in the name of the school or the name of the authorized entity or individual. This bill adds prefilled syringes to the authorities granted for prescription, possession, and administration of epinephrine auto-injectors in current law. A “prefilled syringe” is defined in the bill as “a device that is approved

SENATE BILL 759

by the federal Food and Drug Administration, that contains a dose of epinephrine, and that is used for the manual injection of epinephrine into the human body to prevent or treat a life-threatening allergic reaction.”

The bill allows a health care provider with prescribing authority who is employed by or under contract with the Department of Health Services to issue a statewide standing order for the dispensing of epinephrine auto-injectors or prefilled syringes for use by trained individuals. The bill also allows prescribers to issue a standing order for the dispensing of epinephrine auto-injectors or prefilled syringes for use by trained individuals. Under current law, certain prescribers are allowed to issue standing orders for the dispensing of an opioid antagonist, and DHS has issued a statewide standing order for the dispensing of naloxone, which is an opioid antagonist.
